Leaves—simple, alternate, oblanceolate, up to 4” long. Thin, olive green coarsely serrate at apical margin, rusty glands on both sides of leaf. Aromatic.

BLOOM: Insignificant
FRUIT: Grayish-blue, clusters along twig, wax coating.

Form: Can be trained as a standard tree, hedge, or left to grow as a dense shrub. Has an irregular form 15–20’ but up to 35’ in height. Suckers from base, smooth, grayish-white bark except new growth is light green to gray.
