Prohibited Invasive

Flower – up to 4 inch spikes or panicles, very fragrant.
Fruit – capsule and seeds are partially winged
Bulbils are aerial tubers that drop to the ground and start new plants (smooth, roundish in shape). Removal of bulbils and underground tubers are essential.

Leaf – alternate, cordate shape with an acute apex, long petioles, 8 inches or longer, arching veins originating from one point at petiole attachment.

Stem/vine is herbaceous, freely branching, twining high into host plant 60 feet.

Form – climbing vine that quickly engulfs native vegetation in natural areas from pinelands and hammocks. Also found along roadways where soil has been disturbed.
